APIs, ReactJS, Bootstrap, Handlebars

#### Back End

MongoDB, ExpressJS, Express Router, NodeJS,  
JWT, Jest, MySQL, ORM, MVC, Axios

---

### Projects

#### **BookMarquis** | Full Stack | <https://github.com/MichaelOlshewski/BookMarquis>

- This application was developed while keeping in mind the default Google Chrome New Tab page.
- Our team utilized Node, Express, MySQL, Handlebars, Sequelize, JavaScript and Custom Styling with SCSS, get and post requests, the GeoLocation API, OpenWeatherMap API, Unsplash API.
- I worked with two other individuals on the front-end to achieve the final layout and front-end functions, and we will continue to add more features to it.

#### **Eat A Burger** | Full Stack | <https://github.com/MichaelOlshewski/CWEatABurger>

- Create a list of burgers that you would like to eat and see the ones that you have eaten.
- This app was created with the use of HTML, CSS, Bootstrap, Handlebars, JavaScript, Express, Express Router, MySQL, Custom ORM, and Node
- This was a very extensive homework assignment that we had to start from scratch. From building the basic html pages with the styling all the way to setting the routes up and creating, reading, updating, and deleting (CRUD) records from the database.

#### **Dinner & A Show** | Front-End | [https://github.com/MichaelOlshewski/Dinner\\_and\\_a\\_show](https://github.com/MichaelOlshewski/Dinner_and_a_show)

- Search for events by city or zip code and display food venues close to that event.
- This app was created with the idea of helping the everyday busy person that doesn't have a lot of time for planning to be able to easily and efficiently plan a night out with a concert and cuisine options that are nearby
- Our team utilized HTML, CSS, Halfmoon UI (CSS Framework), JavaScript with three APIs (Songkick, Zomato, Google Maps) with Ajax.
- Each team member had their own responsibilities, I had the responsibility of linking all three APIs together, and then linking the APIs with the HTML and CSS

---
